Table 3. Model comparison for proportion of gelatinous filter-feeders along the Chl-a gradient. All models have the same terms of random effects (Longhurst Province intercept and Tow within Survey intercept and slope). The final model (indicated in bold) was selected based on the lowest BIC and highest marginal pseudo R^2.

Model	df residuals	Log-likelihood	BIC	Marginal Pseudo R^2	Conditional Pseudo R^2
Relative abundance of gelatinous filter-feeders (RFZ)					
1. RFZ ~ Chl-a	61309	-1440.4	2968.9	0.0009	0.386
2. RFZ ~ Chl-a_sqrt	61309	-1420.7	2929.6	0.0014	0.384
3. RFZ ~ Chl-a_withCeiling	61309	-1434.5	2957.2	0.0010	0.385
4. RFZ ~ Chl-a_sqrt + Survey	61306	-1406.9	2935.1	0.0198	0.378
5. RFZ ~ Chl-a_sqrt + Latitude	61308	-1419.7	2938.6	0.0017	0.386
6. RFZ ~ Chl-a_sqrt + Survey + Latitude	61305	-1404.6	2941.6	0.0206	0.379
